In 2011, Deloitte conducted the first Strategic Moves survey, to explore the extent to which organisations felt that their global mobility programmes were aligned to their business and talent strategies. As expected, the results showed that whilst global mobility was recognised as a key strategic enabler, and critical to achieving business and talent goals, very few companies reported having programmes that were fit for purpose or which could adequately support these goals.

In 2012, a follow-up survey was conducted to find out if the same issues persisted, and to what extent organisations were working to address them. The results were similarly un-encouraging; in many of the participating companies there was sub-optimal investment in global mobility, with the majority of improvement efforts focused on operational and functional areas rather than strategic alignment. Furthermore, most organisations reported a lack of any planned measurement or reporting on global mobility, meaning that future investments were also unlikely to hit the target and bring about significant change or improvement to global mobility programmes.

Now, three years on, we asked some of the same questions to a group of 95 respondents from 73 different companies to see what, if any, progress had been made, and whether global mobility programmes were beginning to fulfil their strategic potential.

A Challenging New Environment

Overall, there has been a slight upward shift in the perception of global mobility programmes amongst respondents compared to 2012; the number of participants rating their programmes as “world-class” has risen from 2% to 8%, whilst the number rating their programme as under-performing has reduced from 6% to 4% (see figures 1 and 2). This suggests that some of the improvement initiatives that were being planned at the time of the last survey may have borne fruit, leading to a small number of companies now being able to move their employees more efficiently and effectively, and make better investments in global deployments. Yet despite this improvement amongst a small number of companies, taken as a whole, the responses to this question would suggest that the overall outlook for global mobility remains relatively uninspiring, with still almost two thirds rating their programme as no better than adequate.

However, when the responses are reviewed in conjunction with improvement initiatives that have been undertaken and are planned, a different conclusion suggests itself: rather than global mobility functions failing to have raised their game over the past 3 years, it may be that the definition of what is considered to be “adequate” or “world class” has changed. That is to say, global mobility is facing a challenging new environment in which the organisational ‘goal posts’ have shifted once more, and global mobility continues to play catch up in terms of its overall effectiveness.

Since 2012, the most commonly completed improvement initiatives have been policy review or redesign, operating model or structure design, and vendor review (figure 3). Taken together, these activities suggest that over the past years the overall focus has been on cost cutting and talent alignment, looking for cheaper and alternative deployment models.
may be required for consultation with the business or dealing with complex cases, many of the organisations we have worked with have been able to move much of the processing and operational aspects of global mobility management to shared service centres by ensuring that processes and operating procedures are standardised and executed consistently by all stakeholders (see our recent article on Global Mobility offshore shared service centres for more detail). In fact, the Deloitte 2013 Global Shared Services Survey found that 22% of organisations were utilising shared services for expatriate administration, and that amongst organisations which did not currently use them for this purpose, this was one of the most common areas being considered. In addition to aiding process efficiency and cost reduction, utilisation of shared service centres can free up time for the rest of the global mobility function to focus on higher value consultative activities. Organisations which discount this an option may be inhibiting their own development, and this may be one of the reasons why many global mobility functions are still finding it difficult to deliver against the changing expectations.

Figure 4 below, developed in conjunction with Bersin for Deloitte, shows the typical stages of development of a high performance global mobility function. Whereas previously functions achieving Level 3 were considered to be “mature” or “market leading”, now much more is expected of global mobility, including participation in global workforce planning, consulting on the utilisation of global mobility to achieve business and talent goals, and monitoring and analysis of global mobility metrics. This is a huge step change for a function that was previously considered to be largely administrative in many organisations, and focused solely on delivering operational and compliance excellence.

Incremental Advancements...

Looking outside of the global mobility function itself at wider global workforce
global approach to managing a global workforce and talent. This is a significant change to the traditional models, as well as changes in technology and the emergence of organisations who manage global mobility on a much more sophisticated framework.

The reliance on traditional deployment types to address an increasingly complex global talent landscape is also evidenced by the type of workforce planning activities that companies are undertaking (figure 6); 93% of respondents rated their company as adequate or excellent at moving people to work, whereas only 72% could say the same about understanding future skill requirements, and only 75% understanding where skilled workers are located.

Yet these findings should be taken with a pinch of salt: when the same question was asked of HR professionals in the Deloitte Human Capital trends survey 2014, over two thirds of companies reported competency in understanding skills and capability gaps and where skilled workers were located, but only 52% described themselves as competent at moving people to work (global mobility) (figure 7). This highlights, in general, a misalignment in the perception of global mobility amongst global mobility professionals and other HR colleagues, and echoes the results of our 2012 Strategic Moves survey in which 70% of talent and reward professionals surveyed considered global mobility to be inadequate or poor.

What Lies Ahead?

In addition to asking companies how they are addressing current global mobility and talent management challenges, we also asked them how they see the future of global mobility (figures 8 and 9). Amongst respondents, the scenario seen as most disruptive for mobility in the future is increasing interconnectedness, leading to a flexible, virtual workforce. Yet this isn’t some far removed vision of the future; it reflects a reality that some companies are already beginning to face. As cross-border teams, remote working and dual-income households become more and more common, together with the emergence of city based talent hubs, many companies are experiencing an increase in numbers of business visitors, commuters and alternative cross-border working assignments. This has a number of implications for both compliance management and programme governance as many companies do not yet have the appropriate mechanisms in place to deal with these scenarios and are doing so at present on a largely ad-hoc basis.

The second most anticipated scenario is a two-tiered labour market of high and low skilled workers, with different types of individuals going on assignment, and greater ability for high skilled individuals to demand customised and high cost package as a result. As with the previous “future vision”, this reflects a trend we see in the market place towards more “bespoke” mobility management and greater diversity in deployment models and practices. At one end of the spectrum, we are seeing more individuals being sent on cheaper, cost-effective, or local moves, reflecting their larger supply of skills in the global workplace versus at the other end a small cadre of “high potential” or specialised skilled labour being sent on rich packages for strategic and business critical assignments.

Once again, these “future visions” make it clear that global mobility can no longer be satisfied with being a process administrator and policy owner for the business, but needs to be prepared to engage with an increasingly complex reality. It needs to step up to the challenge presented to it by the emergence of organisations who manage their workforce on a global basis and look at their future global skills requirements as innovation disrupts their core business models, as well as changes in technology and the way we, as employees, live and work. This is a significant change to the traditional role of many global mobility functions and global mobility professionals. Yet if they do not rise to this challenge then others
are likely to take their place either inside or outside the organisation, and global mobility as we know it today is likely to be relegated to pure administration as opposed to evolving with the business.

**Survival Of The Fittest**

In summary, it appears that three years on many of the same issues persist for global mobility: a perception that global mobility is not fit for purpose and a lack of any measurement based improvement plans has led to untargeted investments delivering suboptimal or marginal improvements. Yet the real challenge is in the shifting goal posts and the changing expectations of what global mobility should do. With the introduction of global workforce management initiatives, greater cross-border fluidity amongst the workforce, and anticipated diversification of assignees and deployment models, global mobility is required to provide more creative deployment solutions together with analytical capabilities which lead to strategic global workforce insights to support the company in achieving its business and talent goals. As such, now is the time for global mobility to work to get ahead of the curve and plan proactively for these changes.

**Monday 2nd February 2015 2.15pm**

**Short-Term Business Visitors: Staying Ahead Of The Game**

Any global employee is potentially a business traveller, capable of creating tax or immigration obligations in any country in an era of increased scrutiny by tax authorities around the world. For many organisations, defining the size of the population and identifying the relevant individuals is the biggest challenge. We discuss how a data-driven approach utilising the latest analytics techniques coupled with tax and immigration expertise can enable a process to identify, review and propose actions for organisations to help manage business traveller compliance risk efficiently for any size of population. Furthermore, this data also provides business and mobility leaders the opportunity to pro-actively manage business travel before an issue arises, identify cost reduction opportunities by analysing spend and evaluate adherence to an organisational travel policy.
